

# Adding a Third EZ-Bridge<sup>®</sup> LT+ Unit – Tycon OS

**Summary:** It's possible to connect multiple units to a single unit configured as a transparent access point (AP WDS). The limitation of client units talking to an AP is about 30 units.

1. The EZ-Bridge LT+ units ship with one unit configured as AP WDS and the other units configured as STATION WDS.
2. To add additional Stations (Clients), the SSID, Channel Width and Wireless security type and key need to be the same on all the units.
3. To change wireless settings from the Status screen click on the SSID in the Wireless Section

**Link Status**

ENABLE ALIGNMENT BUZZER

-25 dbm	45 sec	30 sec	15 sec	750µs	45 sec	30 sec	15 sec
-50 dbm				50%			
-75 dbm				75%			

Signal Strength (dbm)      TX-CCQ (%)

**Wireless**

**QCA9531 802.11bgn Radio**

SSID: EZ-BRIDGE1  
 Mode: Client-WDS  
 Channel: 1 (2.412 GHz)  
 Bitrate: ? Mbit/s  
 MAC-Address: 04:F0:21:37:B3:FF  
 Wireless is disabled or not associated

4. From the NETWORK | WIFI Page you can change ESSID (SSID), Channel Width and Wireless Security.

## Interface Configuration

General Setup	Wireless Security	Advanced Settings
Mode	Station (WDS)	▼
ESSID	EZ-BRIDGE1	←
BSSID		
Guard Interval	Short	▼
Data Rate (Mbps)	Auto	▼
Auto reset radio when txccq drop drastically.	<input type="checkbox"/>	

## Device Configuration

General Setup	Advanced Settings
Status	100% <b>SSID: EZ-BRIDGE1   Mode: Client-WDS</b> <i>Wireless is disabled or not associated</i>
Wireless network is enabled	<b>DISABLE</b>
Country Code	United States ▼
Wireless Profile	802.11g+n ▼
Channel Spectrum Width	40MHz 2nd channel above ←
Channel	Auto ▼
Background ACS scan	<input type="checkbox"/> Automatically scan and switch to best channel after a period of time, default is 60 seconds
Scan List:	<input type="checkbox"/> Enable Scan List
	<input type="checkbox"/> 1 (2.412 GHz) <input type="checkbox"/> 2 (2.417 GHz) <input type="checkbox"/> 3 (2.422 GHz) <input type="checkbox"/> 4 (2.427 GHz)
	<input type="checkbox"/> 5 (2.432 GHz) <input type="checkbox"/> 6 (2.437 GHz) <input type="checkbox"/> 7 (2.442 GHz) <input type="checkbox"/> 8 (2.447 GHz)
	<input type="checkbox"/> 9 (2.452 GHz) <input type="checkbox"/> 10 (2.457 GHz) <input type="checkbox"/> 11 (2.462 GHz)
Transmit Power	Max ▼
	Max Transmit Power: 30, Max Single Chain Transmit Power: 27
Outdoor Channels	<input type="checkbox"/> Only applicable to European countries

**Note:** If during the setup process you get stuck, it's best to take the units back to factory defaults and start over. You can reset to factory defaults on the **SYSTEM | BACKUP/FLASH FIRMWARE** page and then click on **Perform Reset** button. You can also reset to factory defaults by powering up the unit, waiting at least 2 minutes, then pressing and holding the black reset button on the bottom of the unit for at least 15 seconds. Then wait for at least 2 minutes for reboot.

## Flash operations

Actions

### Backup / Restore

Click "Generate archive" to download a tar archive of the current configuration files. To reset the firmware to its initial state, click "Perform reset".

Download backup:  Reset to defaults: 

To restore configuration files, you can upload a previously generated backup archive here.

Restore backup:  No file chosen

### Flash new firmware

Upload a firmware here to replace the running firmware. Check "Keep settings" to retain the current configuration.

Keep settings: Firmware: (current ver: TyconOS v2.4.21\_b171027)  No file chosen
